

# Social networks monitoring of water resources

Towards self-regulation  
of hydrological systems

Albert-Ludwigs-Universität Freiburg

**UNI  
FREIBURG**

Dr. Christoph Külls

Institute of Hydrology

## National Water Resources Masterplan for Rwanda 2012-2035 (NWRM)

- Irrigation and hydro-power on the rise
- *Assessment of resources surface and groundwater*
- *Assessment of rural and urban demand*

### Demand and Resources Balance

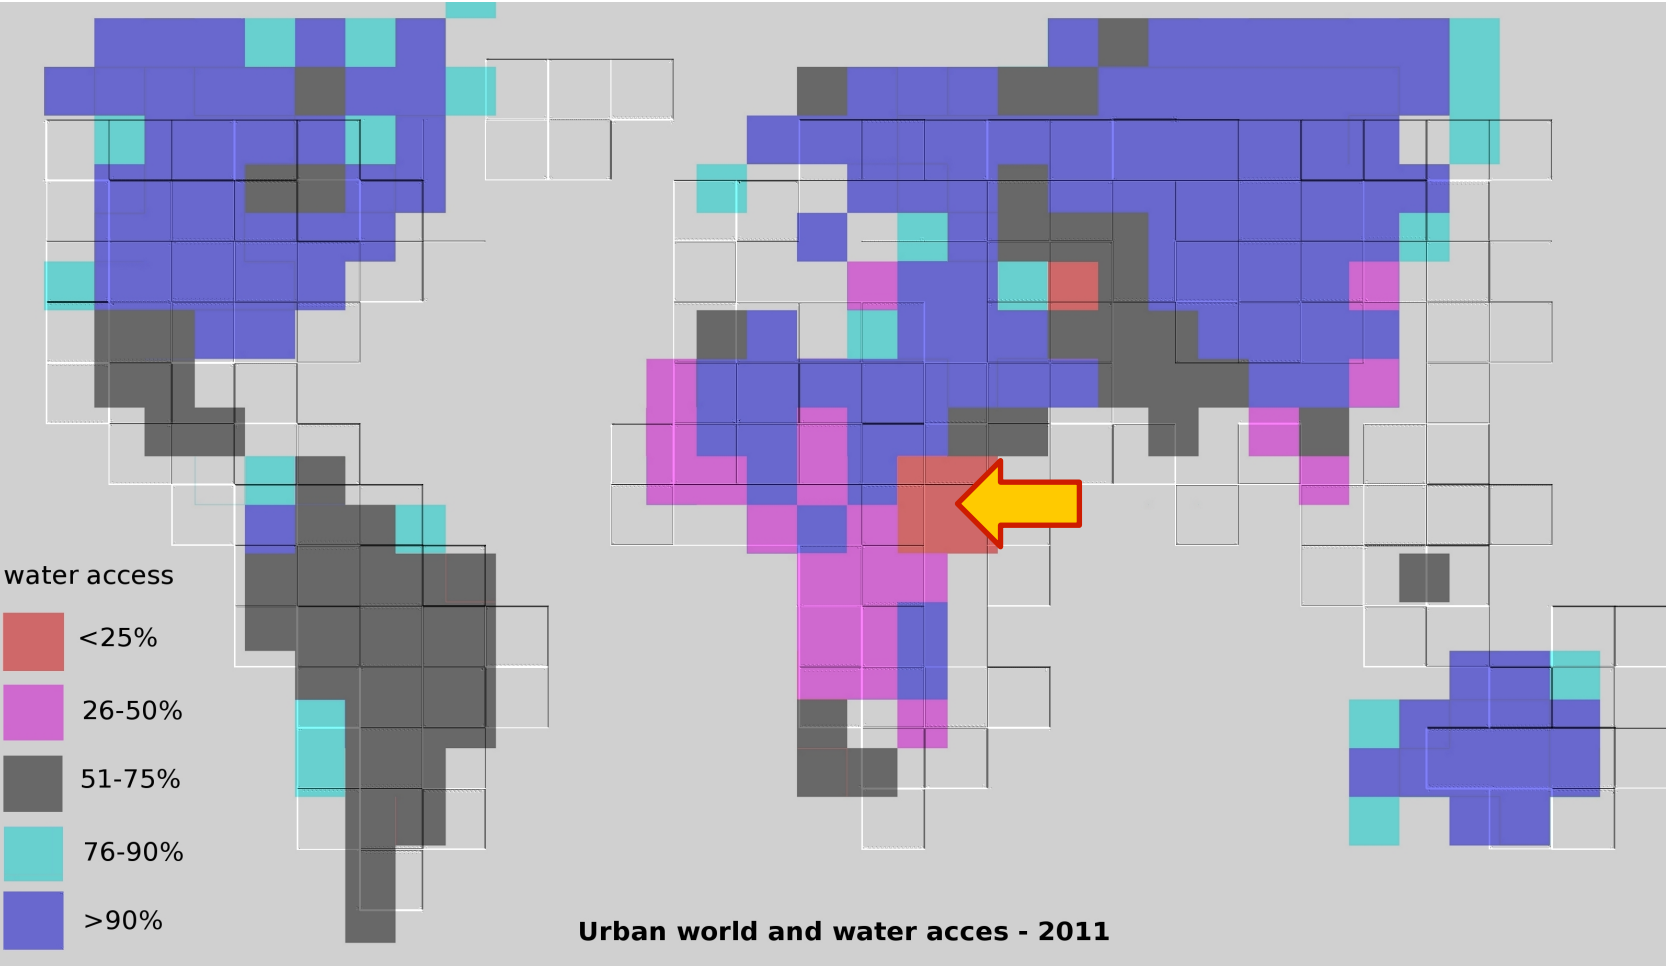

- **Strategic decisions and options**

- **Management structures**

# Access to water supplies

## Central-East Africa is a key area

Source: United Nations, Department of Social and Economic Affairs (2011)

# Urbanization in Africa

## Still dominance of rural population and demand

Percentage urban by major area, selected periods, 1950-2050

Major area	Percentage urban					Rate of urbanization (percentage)			
	1950	1975	2009	2025	2050	1950-1975	1975-2009	2009-2025	2025-2050
Africa	14.4	25.7	39.6	47.2	61.6	2.32	1.26	1.10	1.07
Asia	16.3	24.0	41.7	49.9	64.7	1.55	1.62	1.13	1.03
Europe	51.3	65.3	72.5	76.9	84.3	0.96	0.31	0.36	0.37
Latin America and the Caribbean	41.4	60.7	79.3	83.8	88.8	1.54	0.78	0.34	0.23
Northern America	63.9	73.8	81.9	85.7	90.1	0.58	0.30	0.28	0.20
Oceania	62.0	71.5	70.2	70.8	74.8	0.57	-0.05	0.05	0.22

*Source: United Nations, Department of Economic and Social Affairs, Population Division: World Population Prospects DEMOBASE extract. 2009.*

- Africa and Asia post 1975 urbanization (all others pre)
- Rural-urban population from 4:6 in 2010 to 6:4 in 2050...*maybe*
- **Balanced approach to rural-urban resources management**

# System Analysis

## Multi-scale basin and aquifer approach

### Legend

Transboundary basins

Nile East

Nile-Basin

Tanganyika

Congo-Basin

0 40 80 km

## 2 International basins

- *National and Transborder Management*

## 9 major IWRM basins

- *IWRM Basin committees*

## 25 meso-basins

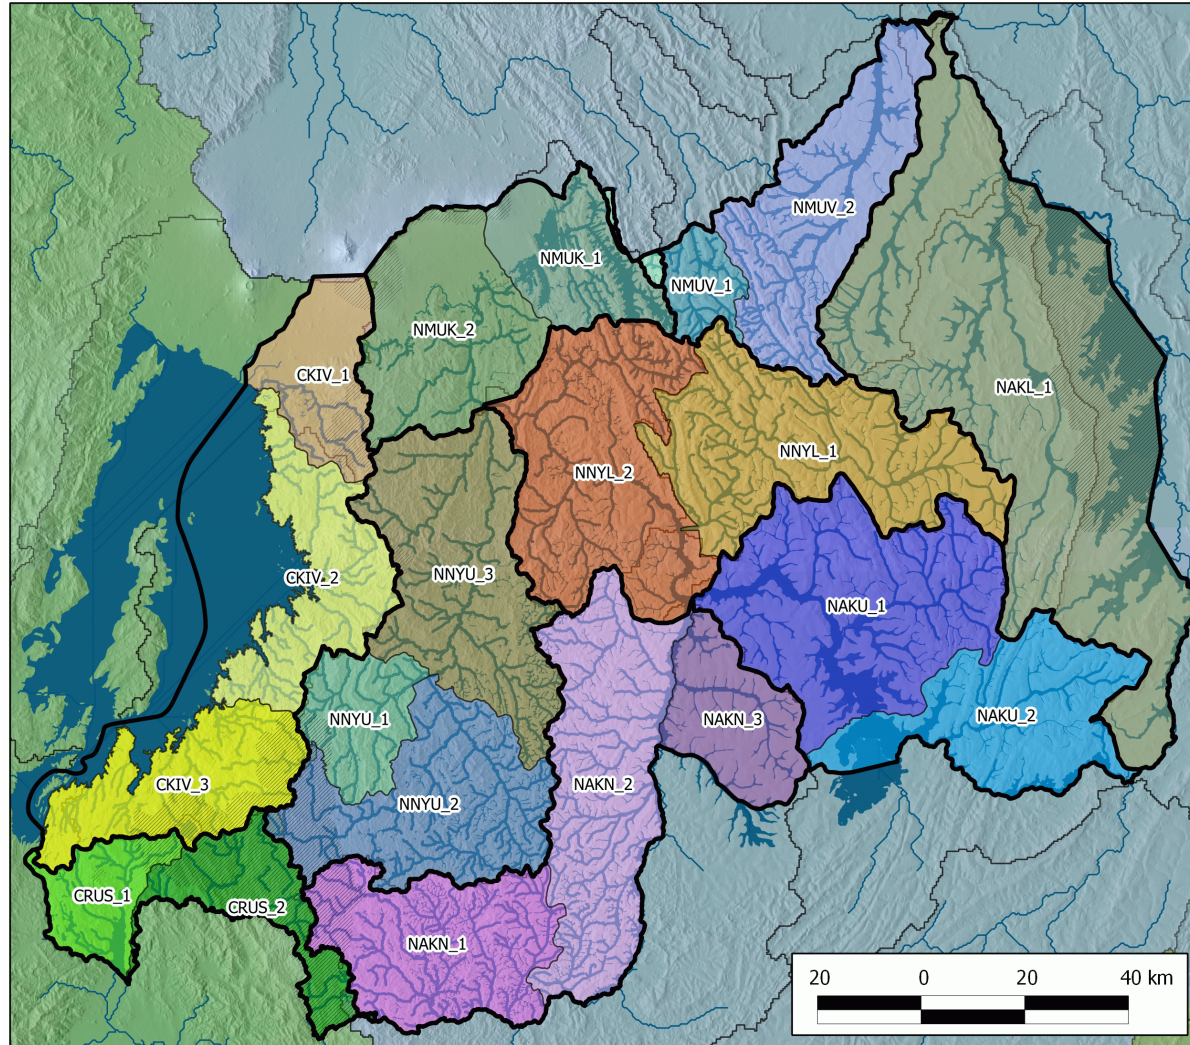

- *Problem-oriented (hills)*

## 100 micro-basins

- *User-oriented, wells*

# System Analysis

## Multi-scale basin and aquifer approach

### 2 International basins

- *National and Transborder Management*

### 9 major IWRM basins

- *IWRM Basin committees*

### 25 meso-basins

- *Problem-oriented (hills)*

### 100 micro-basins

- *User-oriented, wells*

# System Analysis

## Multi-scale basin and aquifer approach

### 2 International basins

- *National and Transborder Management*

### 9 major IWRM basins

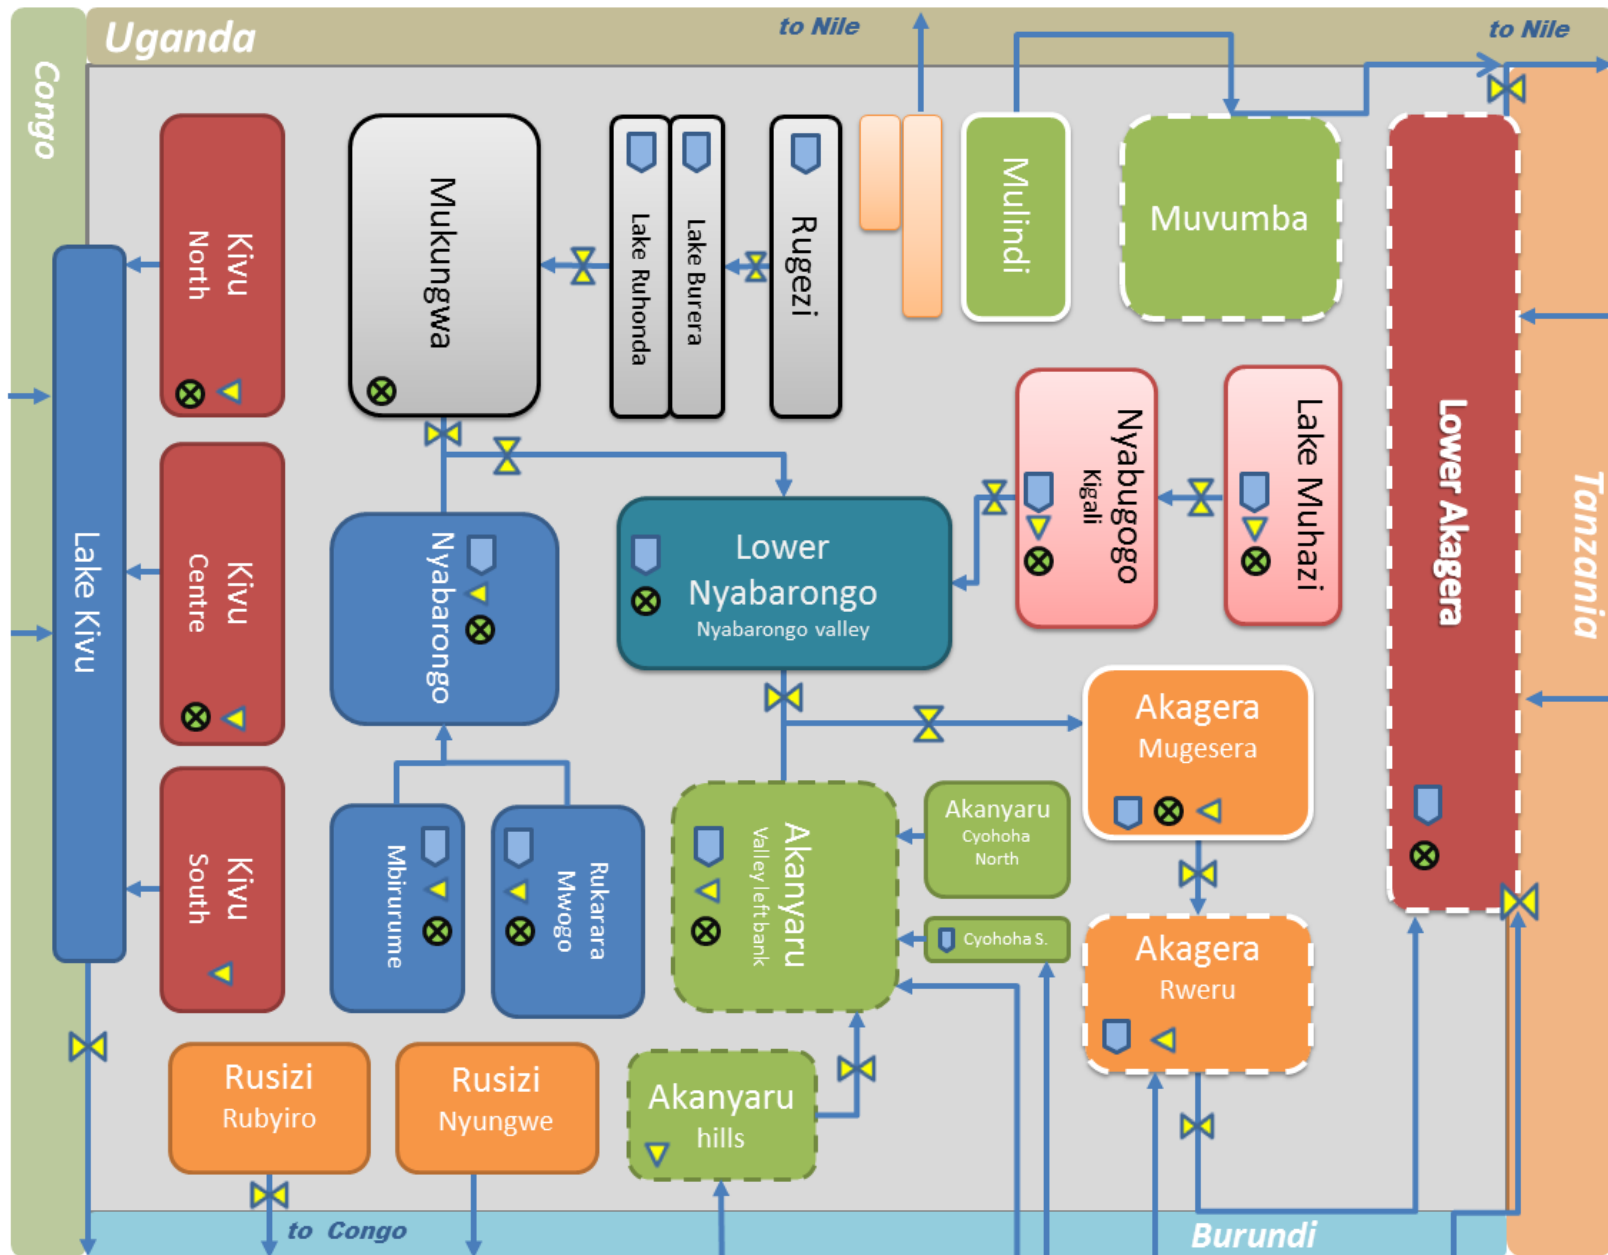

- *IWRM Basin committees*

### 22 meso-basins

- *Problem-oriented (hills)*

### 100 micro-basins

- *User-oriented, wells*

 water level of lake / wetland  
 river gauge in basin

 groundwater level (piezometer)  
 runoff gauging station at (sub)basin boundary

 basin or sub-basin  
 flow  
 basin receiving transboundary inflow

# System Analysis

## Multi-scale basin and aquifer approach

### 2 International basins

- *National and Transborder Management*

### 9 major IWRM basins

- *IWRM Basin committees*

### 25 meso-basins

- *Problem-oriented (hills)*

### 100 micro-basins

- *User-oriented, wells*

# The hidden hydrological engine

Groundwater drives 85-90 % of river flow (baseflow separation)

## Hydrogeology of Rwanda

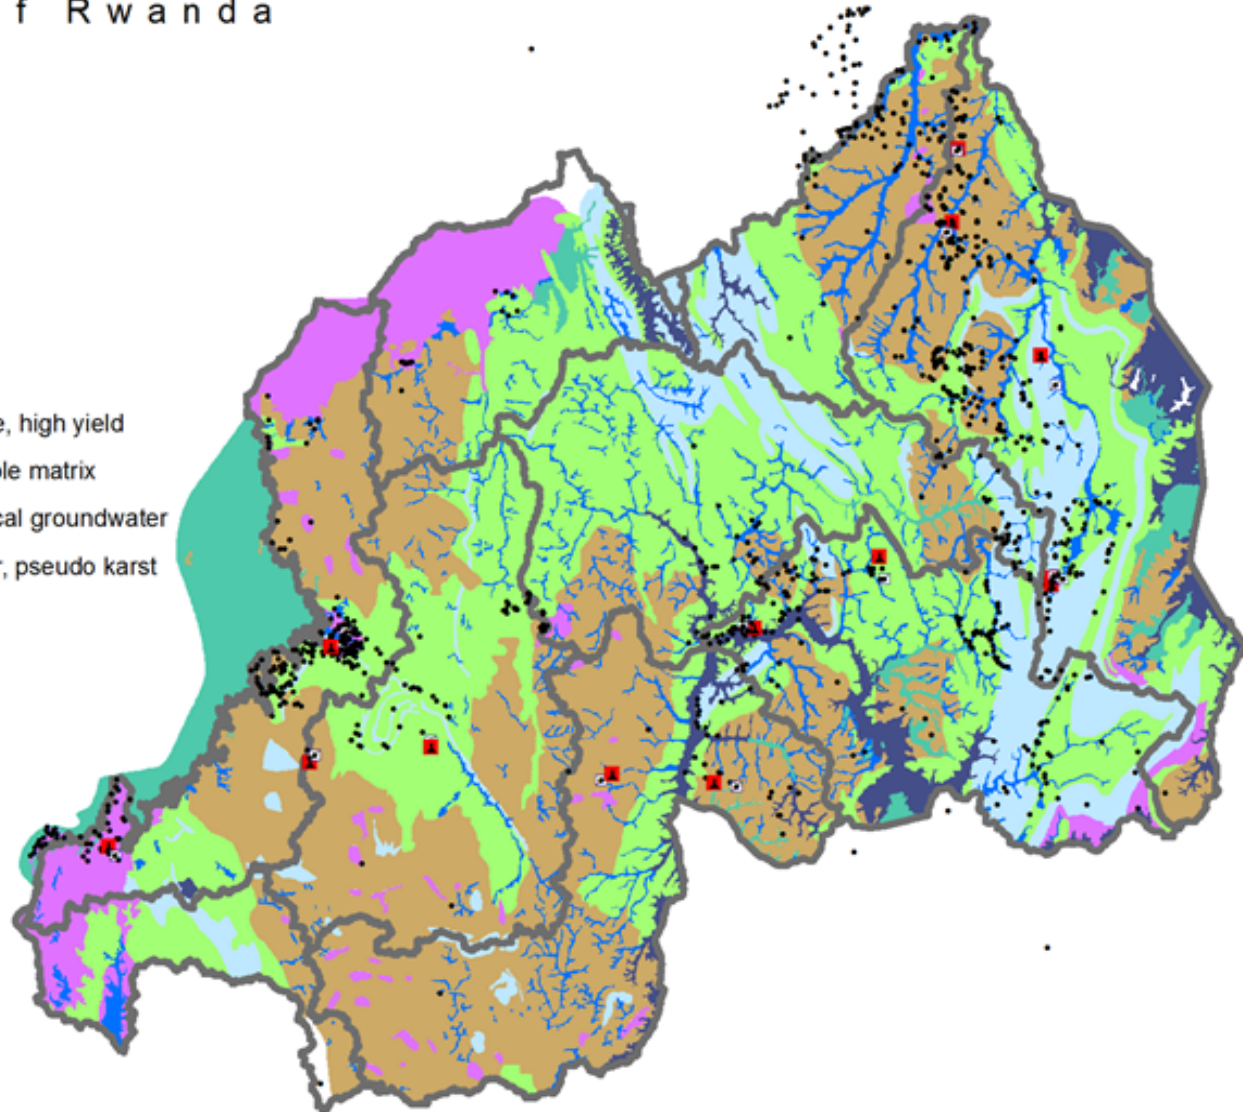

### Legend

#### Monitoring

- ISO
- PZ
- borehole
- Basin level 1

#### Groundwater

- Alluvial aquifer of local importance, high yield
- Alluvial/organic aquifer with instable matrix
- Complex fractured aquifer with local groundwater
- Complex fractured/layered aquifer, pseudo karst
- Fractured aquifer with good yield
- Granite / pegmatite, low yield
- Lake

50

km

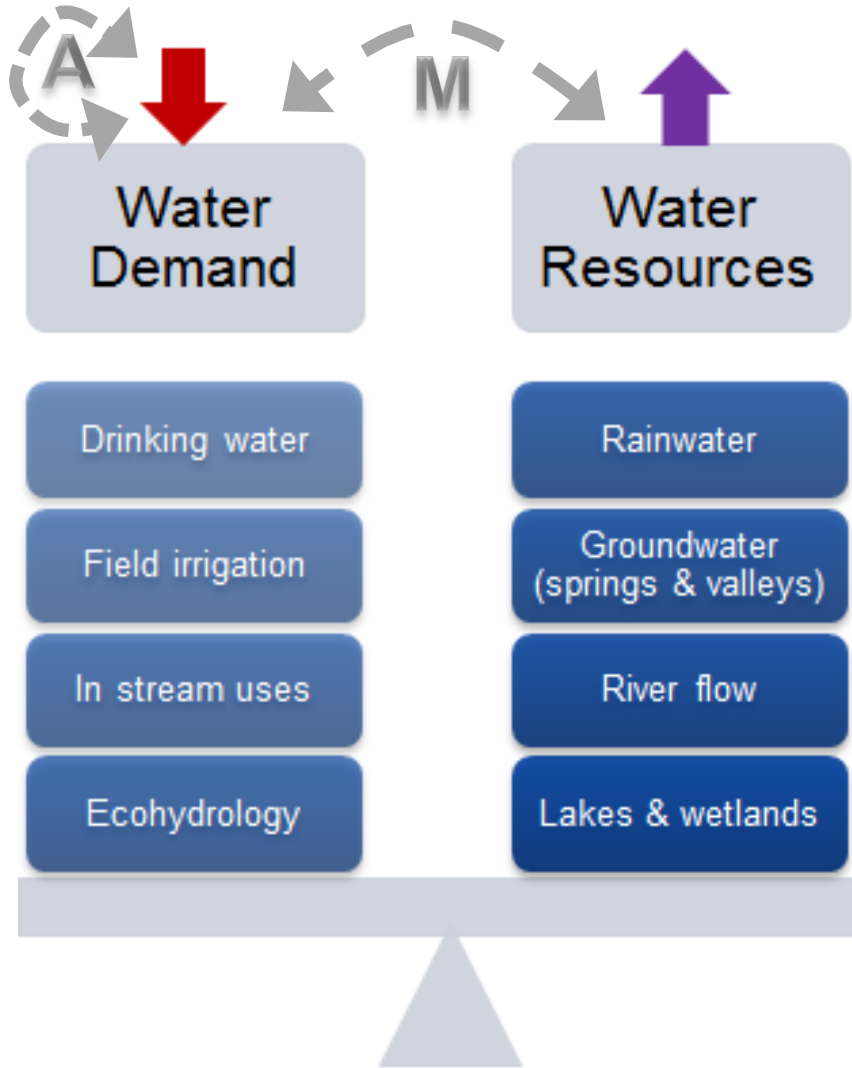

# Social monitoring at local scale

Enabling the rural population to self-regulate demand

# Social monitoring at local scale

Local scale consumer flexibility by local monitoring

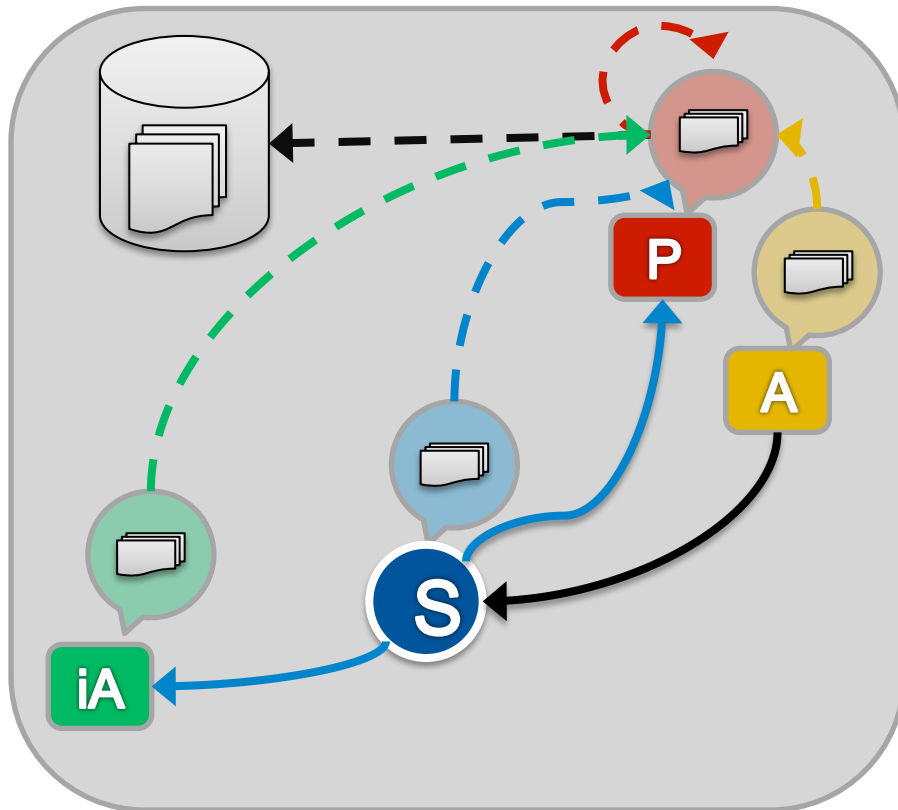

# Social monitoring at local scale

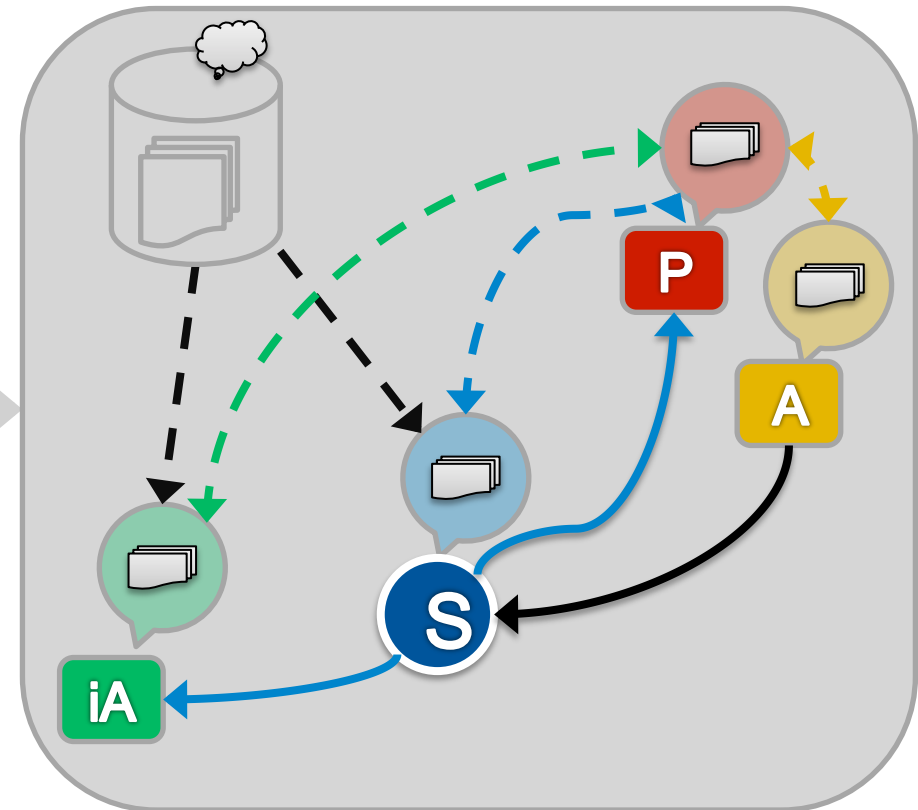

Enabling the rural population to self-regulate demand

Phase A  
Data collection

Phase B  
Guidance levels

*Revision in case of indicator alerts*

# Social monitoring at local scale

## Distributed monitoring , reporting and awareness

### Equipping wells and valley irrigation systems with *community sensors and loggers*

- *100 devices*
- *Water level, temperature, conductivity, turbidity and social data*
- *Data transmission not automatic*
- *Community observer needed*
- *Daily to weekly reading with mobile phone and SMS (HMS)*
- *Objective: Definition and display of guidance levels and **red lines***
- ***Social control of compliance***

# Results from surveys

Demand flexibility by guidance levels increases resilience

pumping

Pumping flexibility (pf) is introduced:

- Pumping rate ( $pr$ )
- Pump depth ( $pd$ )
- Actual pumping volume ( $pv$ )
- Potential storage ( $S$ )
- Actual storage ( $A$ )

$$pa = pr \cdot \left( \frac{(A - pd \cdot S)}{(S - pd \cdot S)} \right)^{pf}$$

# Summary & conclusions

Society and hydrology – water resources Rwanda

**Local users adapt to ,*known*' scarcity**

**Guidance data for locals needed**

**Guidance data can be used for self-regulation**

**Monitoring needs to become multi-scale and nested**
